

Closure-insufficiency split, deployed residual-only COSMO-SAC ($n = 60$)

total error = 1.47

input insufficiency
 ≤ 0.62

model misspecification
 ≥ 0.85

upper bounds on the input-insufficiency term:

● LOTV bin g (headline) = 0.62

● Ridge out-of-fold = 0.62

● RF out-of-fold (deflated) = 0.56

● kNN-in- z^* (deflated) = 0.40
