

Project evidence map

The report separates measured facts, diagnostics, hypotheses and validation that still needs GPU runs.

CLAIM	EVIDENCE	STATUS
DirectGNN is a strong control	scaffold split external baselines	confirmed
Physics pays a small scaffold tax	TGNN - DirectGNN +0.089 MAE	confirmed
Temperature signal is strong	same-pair Van't Hoff MAE 0.368	confirmed
TGNN proxy misses the signal	short low-to-high run NRTL nearly constant	diagnosed
Structural extrapolation is compositional	BRICS novelty MAE gap	diagnosed
Rescue components need full-budget proof	IDAC, detach, aux pair loss, TIMP	requires GPU

This is why the next result must be a full-budget validation, not another short debugging run.
