

Temperature protocol audit

Low-to-high temperature evaluation is a same-pair protocol, not a new-pair benchmark

Pair overlap
100%
1,751 test pairs

Low-T train
7,120
rows $\leq$ 310 K

High-T test
3,343
rows $\geq$ 330 K

Water rows
12.2%
not dominant

Small solvents
29.6%
 $\leq$ 3 heavy atoms

Positive shift
99.6%
high mean $>$ low mean

VH sign
99.1%
positive slope

VH high-T MAE
0.315
median 0.140

Interpretation

Pair-fitted Van't Hoff proves that the data contain a strong temperature signal.
It is an oracle-like same-pair reference, not a new-pair neural baseline.
